

NORMACLAMP® – Hose Clamps

Applications in the automotive industry

NORMACLAMP® FBS springband clips are specially suitable for use in applications where connections are under extreme cyclic temperature loads:

- Coolant and heating systems
- Fuel lines
- Airducts

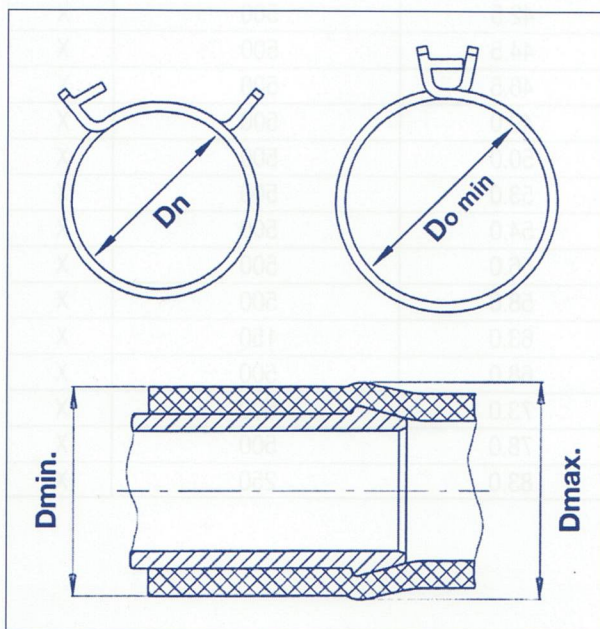

In order to determine the correct size of clamp please proceed as follows:

1. Slide the hose onto the spigot and measure the D_{min} and D_{max} . (see diagram below)
2. From the D_{min} value determine the nominal diameter (D_n) of the appropriate clamp.

$$D_n = D_{min.}$$

3. Compare the D_{max} value with the stated minimum diameter of the open clamp and select the suitable clamp size.

$$D_{o \min} \geq D_{max.}$$

Samples can be provided on request. We shall be pleased to discuss your specific problem or application in detail. Just contact us.
